

Table of Contents

	Page
1. Introduction.....	1
2. Analytical Methods.....	3
2.1. Sample Collection	3
2.2. Mineralogic and Petrologic Analysis	3
2.3. Chlorine Isotopic Analysis	4
2.4. Structural Analysis	4
2.5. Recognition of Syngenetic Features	4
3. Update on Chlorine-36 Analyses of ESF Samples.....	5
3.1. Analytical Results.....	5
3.2. Statistical Analysis of Chlorine-36 Data	6
3.3. Paired Analyses of Coarse and Fine Breccia Materials and Rock Fragments	7
4. Brief History of Tectonism and Structural Elements	9
4.1. Structural Elements in the Central Block	9
4.2. Synopsis of Structural Development	9
5. Description of the Fracture Network.....	10
5.1. Cooling Joints and Tectonic Joints.....	10
5.2. Syngenetic Brecciation.....	11
6. Concepts of Fast-Path Structure Development.....	11
6.1. Presence of Faults that cut the PTn Hydrogeologic Unit.....	11
6.2. Magnitude of Surface Infiltration.....	13
6.3. Structural Features that Result in Lateral Diversion of Flow Away from Fault Zones.....	15
7. Implications of the Mineralogic Record for Fast-Path Recognition.....	18
7.1. History of Secondary Mineral Deposition.....	21
7.2. Calcite	21
7.3. Opal.....	22
7.4. Clays.....	22
7.5. Transported Particulates.....	22
7.6. Feldspar, Crystalline Silicas, and Fe-Ti Oxides	24
7.7. Manganese Minerals	24
8. Work to be Done.....	24
8.1. Evaluating the Structural Significance of Sample Localities along the South Ramp of the ESF.....	25
8.2. Evaluating the Possible Influence of Fracture Orientation on Preferred Flow Paths.....	25
8.3. Further Evaluation of the Interplay between Structural Features and Spatially Distributed Infiltration.....	25
8.4. Mineralogic and Petrologic Settings of ESF Samples	25
9. Conclusions.....	26
Acknowledgments.....	27
References.....	28

Table of Contents (continued)

	Page
List of Tables	
I. Fault Attributes in the ESF.....	13
II. Structural settings, $^{36}\text{Cl}/\text{Cl}$ Values, and Secondary Mineralogy of ESF Sample Sites	19
III. Quantitative X-ray Diffraction results for Bow Ridge Fault Breccia, ESF North Ramp.....	23
List of Figures	
1. Plan view of ESF tunnel, showing its relationship to selected boreholes and faults mapped at the surface.....	1
2. Distribution of $^{36}\text{Cl}/\text{Cl}$ ratios measured for rock samples, as a function of distance along the ESF as measured from the North Ramp Portal.....	5
3. Frequency distribution of $^{36}\text{Cl}/\text{Cl}$ ratios measured in ESF rock samples	6
4. Application of Chauvenet criterion to establish cutoff for identifying the presence of bomb-pulse ^{36}Cl in ESF rock samples	7
5. Analytical results for paired size separates	8
6. Geologic map and cross-section of Drill Hole Wash vicinity	14
7. Geologic map of the Sundance fault, with the projected trace of the ESF	16
8. Comparison of fracture characteristics of the upper lithophysal and middle nonlithophysal zones of the Topopah Spring Tuff	17
List of Appendices	
A. ESF Samples Collected for ^{36}Cl Analysis, February 1995 to January 1997.....	A-1
B. Halide and ^{36}Cl Analyses of ESF Rock Samples, Sorted by ESF Station	B-1
C. Sample Descriptions	C-1
D. Traceability of Data	D-1
